Sandblast Stencil Guidelines

- High-tack stencils are designed for use on raw substrates. Do NOT use on pre-treated or glass surfaces.
- High-tack stencils have a water-based acrylic adhesive designed for bonding to rough surfaces.
- Medium-tack stencils have a petroleum-based adhesive designed for bonding to smooth surfaces.
- Medium-tack stencils are designed for use on primed or pre-painted substrates, glass, synthetic stone, ceramic tile and plastic.
- Always use a 60° blade when cutting stencils with plotters.
- Double liner stencils have an extra liner layer to help hold the centers of letters/designs while transferring from computer to substrate.
